

Digital Health Care Solutions

Bridging Patients' Healthcare & Lifestyle with Advance Telehealth Technology

Vital Signs and Activities of Daily Living (ADLs) monitoring at home!

Scalable Solutions For

Ageing at home

Seniors' Community Care

Chronic Disease Management

Remote & Rural Area Patients

Post Hospital Care

Retirement Homes

Improve Patient Care

- Provide timely care to high risk patients
- Improve quality of life

Lower Healthcare Cost

- Reduce avoidable hospitalizations
- Reduce readmissions
- Low cost preventive interventions

Empower Patient in Healthcare

- Enable regular and engaging patient - caregiver connections
- Monitor and advise about risks and preventive actions

Monitoring of Vital Signs

Vital Signs readings are recorded directly to a user friendly Touch Screen device using Bluetooth enabled wireless devices. The user can view his vital signs trends on the screen and data may be shared with caregivers or health professionals. Customized alerts can be sent to a caregiver if a reading is not within specific safe limits.

Monitoring of ADLs

Using sensors, a client's ADLs can be monitored and analyzed. The sensors keep on updating time based movements and other actions thus preparing a profile of visits to critical areas like kitchen, washroom and sleep pattern etc. The system sends customized alert about critical activity or inactivity of a client to caregivers or health professionals.

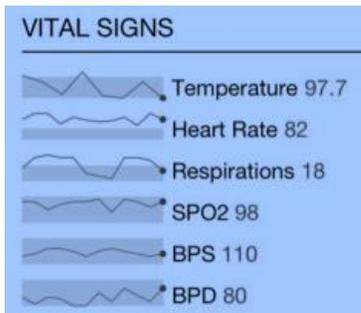

Interactive Health and ADL Assessment

Routine interactive assessment of client's health and ADLs will be done through interviews which will help caregivers or health professionals assess the potential health risks.

Virtual Caregiver Advice

Caregivers or health professionals can connect via video conferencing to a patient providing health tips, medication assistance and advice about a health condition based upon trends/red flags generated through Vital Signs or ADLs.

Vital Signs Data Record and Analysis

Data recorded by the user's tablet from sensors is sent periodically to the Data Centre. User's tablet may also be configured to share the data to caregiver or a health professional. Based on user's health profile, Vital Signs and ADLs over a specific period of time, system will generate health trends or potential risks to take appropriate actions in advance.
